

A Liberty Library

David M. Zuniga

Founder, AmericaAgain!

The U.S. Constitution is the Supreme Law of the Land, yet D.C. organized crime violates it daily and yet is untouchable. Much of the world hates us, and most Americans can't figure out why. The rich get richer, and productive Americans increasingly join the ranks of the poor and unemployed. Unknown to most Americans, the Deep State has run our republic for many generations with complete secrecy; elections are a sham. During the twentieth century our republic was transformed into a plundering empire populated by historically clueless 'voters' who commute to their jobs every day to pay their bills – and to pay the taxes that continue to fund their captors in the Deep State. How did this happen?

To restore America, We the People must take informed, coordinated action; that is TACTICAL CIVICS™. But we also need basic education that is no longer available in most schools or colleges.

Edmund Burke said, "The only thing necessary for the triumph of evil is that good men do nothing". That principle keeps repeating itself, George Santayana said, because "Those that refuse to learn the lessons of history are doomed to repeat them." Our civilization has been under attack for over 150 years; only today do we have the tools to dig out truth. I believe that *the tombstone of a civilization may be laid at that point where truth is no longer defended because it cannot be known*. Today we're exposing lies of our criminal government as never before, so truth can be known.

This reading list for Americans could list several hundred books including bedrock like the Bible, Shakespeare's Works, *Pilgrim's Progress*, C.S. Lewis' *Chronicles of Narnia* and other great works. But instead, I here list 70 works that transformed my life by exposing lies peddled by America's schools, colleges, government and media.

If you choose to embark on a self-education program, I suggest you take a leisurely pace; 5-10 years, at the end of which you will be better-informed than 99.9% of America in terms of civics, history, the Constitution – and why things keep happening in the world as they do.

Because most people will not read 70 works over the next few years, I first list the 15 most vital works. Pick the one that most intrigues you; read it with a highlighter in hand. When you finish it, read another. Move at your own pace. Great books will grow on you; as you review your highlighted passages, life lessons emerge. A pattern comes together. You begin to see through media propaganda; begin to grasp the lies that steer American policy – especially our wars.

Given the duty before us, these 70 works will vault you over walls of ignorance about our history and Constitution; about money, credit, and banking; about how Israel and the Deep State used the boogeyman of communism and now Islamic jihad, to run America from behind the scenes with the help of mega-church corporate pastors.

You will begin to recognize the fallen state of our republic and even of the corrupt Christian pulpit. These books won't make you a pencil-necked geek; *they will impart real wisdom*.

If you believe that the Internet is all we need because it is opening minds and threatening tyrants all over the world, Egyptian dictator Mubarak proved in 2011 that government can shut down a country's Internet access. It has not happened yet in America, but as Tim Wu explains in *Master Switch*, it can. As the movie *The Book of Eli* suggests, when civilization falls, books will be our most valuable treasures.

In paper or eBook format, for less than the cost of two college courses, this Liberty Library will place you and your children in that rare species: *the informed, self-governing American*.

The 15 Most Vital Books (and Two Online Resources)

The American Deep State is Peter Dale Scott's best book yet, of over 40 books published over 42 years, exposing the Deep State. The author has spent his adult life laying a trail of primary-source evidence for the shocking and revealing assertions in his books. The Deep State refers to the banking, war, and oil industries together with the 'intelligence' industry in all its secret agencies. Every foreign war the USA has fought has been instigated by, and directly benefitted the Deep State. This shadow government is unelected, un-accountable, invisible to productive Americans, and ruthless. It first sought to hijack the Constitution through Hamilton and Clay, finally succeeding with Lincoln and ever since. *If you read only one book on the list, make it this one.*

The Sovereign Individual by James Davidson & Lord William Rees-Mogg explains the shake-up of nations introduced by the Internet, much like the impact that the moveable-type printing press had in medieval times. Even now, 18 years after the first edition of this book, the world's institutions have not come to grips with the Internet. But the news is daily illustrating the acceleration of revolution against wicked and bloated industries, institutions, and governments. As institutions attempt to deal with newly-liberated humanity, the authors posit that informed individuals and small busi-nesses will win, big governments and institutions will lose. AmericaAgain! agrees with that assessment.

Hamilton's Curse: How Jefferson's Arch Enemy Betrayed the American Revolution – and What it Means for Americans Today by Thomas J. DiLorenzo (2009) is a long-overdue correction of the record about Alexander Hamilton. Although a courageous hero of our War for Independence, Hamilton was a wily tactician in laying the foundation for America's corrupt banking industry, and perhaps the most destructive 'founding father'. DiLorenzo debunks the long-held legends that deify Hamilton, exposing the man for what he was: a conniving, self-absorbed con artist. In the final chapter, *Ending the Curse*, I find nothing upon which to disagree with the author except that, like most authors offering reform proposals, he offers no mechanism to *enact* his solutions.

Lincoln Unmasked by Thomas J. DiLorenzo debunks the legends offered as reasons for Lincoln's war. The author exposes why Lincoln suspended *habeas corpus*, why he im-prisoned thousands of Northern war dissenters, and why he shut down hundreds of opposition newspapers. The author also exposes Lincoln's real economic agenda. If you wonder why you weren't taught this in school, read the chapters about Lincoln gatekeepers in academia, and the appendix entitled *What They Don't Want You to Read*.

Lincoln's Marxists: Marxism in the Civil War by Walter D. Kennedy and Al Benson, Jr. is another of those books that convinced me that I was cheated even in my expensive private education. The book exposes Union army generals that were Marxists, and the Marxist ideas that informed the Lincoln administration. I voted GOP for 25 years because I thought the GOP would conserve the

Constitution. How little I knew about the history of the GOP's founding and its Red Roots! Rather than the party of individual liberty, it has ever been the power center for mercantilists and bankers.

A Century of War by John Denson; a well-documented account of how Lincoln deliberately suckered the South into war at the behest of Northern mercantilists, directly against the unanimous counsel of his cabinet. Denson omits the crucial Spanish American War – when America was transformed into a world empire – but *The War Lovers* (see below) offers that vital story.

Overthrow: America's Century of Regime Change from Hawaii to Iraq by veteran news correspondent Stephen Kinzer is the best single-volume historical survey I can find covering the U.S. government's attempts at empire. This fast-moving little book is a series of vignettes of U.S. government takeovers of Hawaii, Guam, the Philippines, Puerto Rico and countless others including botched invasions of Mexico, Venezuela, Panama, and sweet spots around the globe, all long before the present invasion of Iraq and Afghanistan. Bottom line: for 125 years, small nations and islands of the world have been mere real estate assets for American corporations and military, violating our Constitution every time.

Drugs, Oil and War by Peter Dale Scott is a more focused explanation of how the Deep State planned and executed American foreign policy and wars since World War II. Many Americans on the left and right are finally realizing that the bankers and war industry are joined at the hip. But in this book, Scott adds the missing pieces, demonstrating how the oil industry and CIA-spawned drug cartels from Latin America to Southeast Asia, and then the Middle East, made the trap complete.

Dallas '63 also by Scott, exposes the players and events to suggest that the assassination of JFK had the aid and consent of the American Deep State and intelligence communities – and possibly a Vice President or two. Bottom line: America's real enemies are *domestic*.

The New American Militarism: How Americans Are Seduced by War is unlike 'anti-war' books, which I do not generally care for. Andrew Bacevich is a former U.S. Army colonel, Vietnam veteran, West Point professor of history and international relations. A conscientious Christian offering a logical, historically accurate analysis of what President Eisenhower dubbed the Military-Industrial Complex. Patriotic Christians, especially active military or veterans, can discover that while the U.S. military industry outspends all other militaries on earth combined, it opposes the positions of Washington, Jefferson, and Madison. Bottom line: veterans and civilians need to reconsider what we were taught; the Deep State programs America's military subculture to violate our Supreme Law as it directs foreign policy of our republic.

Against Our Better Judgment by Alison Weir is only 93 pages of body text, followed by 107 pages of endnotes. The fact that this book was vigorously panned by liberal academia is reason to recommend it even more. Most professional academics are paid shills of the Deep State and its private foundations. Copiously documented with almost 375 references, this book demonstrates beyond reasonable doubt that the modern State of Israel was created by the Military-Industrial-Intelligence mafia as a convenient religious cover for perpetual, profitable war.

JFK-9/11: 50 Years of the Deep State I disagree with his dismissal of Old Testament Scripture, but Frenchman Laurent Guyenot is a Renaissance man with degrees in engineering and Medieval Studies who worked in the arms industry and also authored a study on the psychological and social damage of mass pornography. Like Peter Dale Scott, Guyenot goes quite a bit deeper than Ruppert's 9/11 analysis, demonstrating Deep State sponsorship of the JFK assassination and 9/11

attacks. Bottom line: the smoking gun of both actions leads to Israel's Mossad and the CIA.

The Fourth Turning: What the Cycles of History Tell Us About America's Next Rendezvous With Destiny by William Strauss and Neil Howe is a more exciting 1998 follow-up to their 1991 *Generations: The History of America's Future*. In this national bestseller, Strauss and Howe illustrate the historical 80- to 100-year cycle called a *saecula*, further divided into five 20-year periods/generations. The authors call each transition between these generations, a *turning*. In 1998, the authors accurately predicted the fourth turning of our saecula; a crisis period from 2005-2015. This has been fulfilled in the Ron Paul Revolution, TEA Party movement, 'Great Recession', impending collapse of the Dollar, and increasing mistrust of institutions. Tracing 'heroic' generations back to pre-colonial times, they conclude that by 2015, Americans in the 'Baby Boomer' and 'Thirteener' generations would step up to meet the crisis. Bottom line: today's Chicken Little refrain is dead wrong.

The Lost World of Genesis One: Ancient Cosmology and the Origins Debate by John H. Walton, who has a PhD in Hebrew and is a professor of Old Testament Theology at Wheaton, is one of the most liberating books I have ever read! I mean this sincerely. This book smashes the Young-Old Earth Creation debate flat into irrelevance, for begging the question of material origins. His thesis consists of a series of propositions, culminating in the hypothesis that the creation account in Genesis is a description of the universe's construction as a temple of God, not as material 'stuff'. A few high points...

First: There is no reason that God would have communicated 'scientifically-correct' data about His creation to simple, ancient people. In other words, no statement in the Bible conveys scientific truth that the biblical writers would not have already known.

Second: Some statements in the Bible convey cosmological and physiological notions that do not comport with science; for instance, 'domed' cosmology has no scientific merit but it worked well for primitive ancients. Some of the words translated as 'mind' in English actually mean 'entrails' in the Hebrew; people in those days (and for centuries after) believed that emotions and feelings derived from the guts. Walton suggests that God didn't correct them; there was no point, in their place and time. We would not waste our time today trying to argue that our guts are the seat of our thoughts and emotions, yet that is how Young Earth creationists and Intelligent Design apologists defend the creation account!

Third: Walton explains how the ontology of the creation account is not material but *functional*. To illustrate, he compares a chair to a corporation; a chair is 'created' by the nature of its *material* status, but a corporation is 'created' by its *functional* status; on pg. 26: "*In a functional ontology, to bring something into existence would require giving it a function or a role in an ordered system, rather than giving it material property.*" Because the entities created in the Genesis account are material, we presume that Genesis must be a material ontology. This is a senseless assumption, as Walton explains with contextual evidence of many ancient Near Eastern creation accounts and analyzing Hebrew words like *bara*. Bottom line: the Origins debate is a false dilemma.

Constitutional Income: Do You have Any? by former Idaho Rep. and structural engineer Phil Hart is the meticulously-documented story of how from 1909-1913, Congress conspired to create the largest, longest-running financial crime in history. Featuring facsimile copies of congressional floor debate, private memoranda, and newspaper articles of the period, this book will make every

Taxpayer furious, and give ammunition to every law-abiding Nontaxpayer among today's estimated 67 million non-filers. Bottom line: all of that corruption and pork isn't magic; follow the money.

A Tax Honesty Primer is not a book, but my hobby website. Having read the Internal Revenue Code, countless court rulings and cases, seven books on Tax Honesty, and dozens of websites over two years, I became a law-abiding Nontaxpayer 20 years ago. I couldn't find enough information to take action and expose the corruption, so I created *A Tax Honesty Primer* as the first step in Taxpayer due diligence, so others can avoid years of wading through tax protestor theories. The site is not my opinion or 'position'; it's easily verifiable facts, court rulings, Tax Code sections, federal regulations, jury verdicts, former IRS commissioner and IRS employee statements, and well-settled law. On the site, I do not sell anything or accept donations.

Tax Honesty is wonderful defense for the self-employed (all but impossible if you work for a large company); but defense will never arrest Congress' crimes. TACTICAL CIVICS™ is our new way of life to arrest organized crime in legislatures. One of 22 proposed AmericaAgain! Legislative Action projects is a constitutional amendment outlawing taxation of wages and salaries. This was promised by the politicians when they instituted the income tax, as Phil Hart's book explains. Until we pass that amendment, Tax Honesty offers short-term relief. Secession, on a household level.

The Official Counterfeiter is a 36-page cartoon booklet created in 1969 by Vic Lockman; the clearest explanation I've ever read, of Congress' money crimes on behalf of the corrupt banking industry.

War, Oil, Drugs, Banking: The Deep State and Puppet Politics

Myths, Lies and Oil Wars by William Engdahl is probably the best book if you want to learn about the theory of Abyssal Abiotic Petroleum Origins (i.e., petroleum doesn't come from dead plants and dinosaurs, so-called 'fossil fuel', but from deep in the earth and is practically limitless) and to grasp U.S. military industry geopolitics in the Middle East, Russia and China over decades.

The Deep, Hot Biosphere: The Myth of Fossil Fuels by Dr. Thomas Gold was plagiarized from the Russian-Ukrainian theory of Abyssal Abiotic Petroleum Origins – the theory that there exists an enormous store of hydrocarbons upwelling from deep within the earth that can provide us with gas and petroleum for as long as man lives on Earth. In this 1999 book, Dr. Gold copied the original work of the Ukrainian and Russian pioneers to debunk the myth that petroleum had its genesis in dinosaurs and old plants. The theory is thus called the theory of 'abiotic oil' and includes three controversial, potentially earth-shattering positions:

First: Below the surface of the earth is a biosphere of greater mass and volume than the sum of all living things on all continents and in all oceans.

Second: The inhabitants of this subterranean biosphere are not plants or animals but heat-loving bacteria that survive on hydrocarbons (natural gas and petroleum).

Third: Most hydrocarbons on Earth are not byproducts of biological debris (fossil fuels) but were a common constituent of the materials from which Earth itself was formed.

If these scientists are correct, the implications are disastrous for the oil industry. It would also explode the environmentalist so-called 'Peak Oil' theory – which went the way of the dinosaurs in 2012 when the GAO reported that the Green River Formation alone contains more recoverable petroleum than the entire previously-known world oil reserves!

Considerations About Recent Predictions of Impending Shortages of Petroleum Evaluated From the Perspective of Modern Petroleum Science by J. F. Kenney, is an online white paper that smashes the unfounded ‘Peak Oil’ scare trotted out along with the equally unsupported ‘anthropogenic Climate Change’ theory. These false prophets, ironically, helped drive oil prices through the roof for years; without a shred of evidence from petroleum science, they are useful puppets for Big Oil.

J.F. Kenney is senior geologist at Gas Resources Corporation in Houston. He lists most of the Russian and Ukrainian scientists that hypothesized abyssal abiotic petroleum origins’ long before Dr. Gold plagiarized their work to claim in the American scientific media that it was his own. Besides the Ukrainian and Russian originators of the theory, a growing body of supporting evidence is being produced by American scientists like Jean Whelan at Woods Hole Oceanographic Institute; Mahlon Kennicutt, Professor of Chemical Oceanography at Texas A&M University; Giora Proskurowski, Professor of Oceanography at U. of Washington, and others.

The ‘fossil fuels’ hypothesis originated in the 18th century; it held that petroleum miraculously evolves from decayed biological material – plants and animals – which would mean it is limited. The fossil fuels hypothesis has been replaced over the past four decades by the Russian-Ukrainian theory of ‘Abyssal Abiotic Petroleum Origins’ which establishes that petroleum is a primordial material that erupts from great depth and is almost unlimited in abundance, depending on extraction technology and exploration competence.

The Great Oil Conspiracy: How the U.S. Government Hid the Nazi Discovery of Abiotic Oil from the American People by Dr. Jerome Corsi is much like Thomas Gold’s book, building on the Ukrainian and Russian theory of Abyssal Abiotic Petroleum Origins without giving due credit to the Ukrainian and Russian scientists that developed the theory long before the rise of a German variation of the theory.

Crossing the Rubicon: The Decline of the American Empire at the End of the Age of Oil by Michael Ruppert is the only 9/11 book I include, and this will be a long synopsis because the 9/11 debacle is important. Not as much for the tragedy itself, but because of the major shift in propaganda and programming of American minds that the government and media have perpetrated over the 16 years since that new Pearl Harbor hoax.

Erasmus of Rotterdam said, “In the land of the blind, the one-eyed man is king”. We needn’t know everything about the 911 debacle; what we do know is more than enough to know it was a massive government fraud on the People.

A fifth grader in possession of the facts grasps this general concept: powerful men and institutions have influenced governments throughout history. The 150-year pattern in America since Fort Sumter is: first we experience a catalyst attack either of unexplained origin or out of proportion to the war that follows. Next, federal government and its industry allies ratchet their power; government gains new ground against its own population, then holds the new ground to gain further illicit powers. This is the one-way advance of tyranny.

Ruppert’s book is the most credible of 22 books and three videos I reviewed over nine years relating to the 9/11 debacle. I no longer spend time on this; as I said above, I only include this book because that hoax changed American domestic and foreign policy for the foreseeable future. The government’s official story and its media hacks must be hooted off the stage.

Yet it's pointless to argue about 9/11 itself. TACTICAL CIVICS™ can empower the American people to beat the predator-parasite horde at last: self-governing citizens and resurgent sovereign States can *enforce* the Constitution and arrest the long pattern of government-corporate-military corruption using a legal choke-collar on each individual legislator in our statehouses and in Congress. As we work on this long-term arrest mechanism, there's no sense arguing about the criminal's last in a 125-year series of frauds.

Whoever our domestic enemies are, they use Congress for financing and legislative enablement. International players' goal is always to become insanely wealthy, *and Congress is their key*. After every war, they get us arguing amongst ourselves for decades about who caused the fire so we won't stop to think about the kingpins that hired the arsonist.

I am one of several hundred engineers, scientists, and architects who signed on at *Architects and Engineers for 911 Truth* not because I care to argue about this latest in a long pattern of war-sparking hoaxes, but because the official story is so preposterous in structural forensics, physics, and materials science. As a professional engineer having performed structural design for 28 years, I became interested in the story when I witnessed video of the collapses of WTC 1 and 2, and especially WTC Building 7, that day.

To assert that the first three instances in history of fire-induced collapse of steel multistory buildings occurred in one city, in one day – one of them with no aircraft collision – is ludicrous. Of countless raging fires in steel structures around the world, some have lasted far longer than the WTC fires, some led to plastic collapse – but never to the pulverizing, free-fall-velocity collapse seen thrice on 911 but never seen before or since – *except in every controlled demolition*.

Occam's razor holds that the simplest explanation is most likely. Put another way, if evidence contradicts an explanation that adds a pile of unlikely assumptions, the explanation is likely false.

On July 28, 1945, a fully-fueled B-25 Mitchell bomber lost in fog over Manhattan slammed into the 79th floor of the Empire State Building. The structure sustained no lasting damage, much less did it collapse in the free-fall-velocity, symmetrical implosion failure seen in steel structures *only* in controlled demolition.

Geopolitical forces in play in the world's mega-events need phenomenal amounts of money, logistics, and coordination that only major financial players enjoy. The idea that 9/11 was done by a handful of Muslims is ludicrous. It's one thing to believe legends about 'Honest Abe' because you were indoctrinated in school; it is another thing to believe a ludicrous story that defies logic and evidence simply because a few in the truther camp happen to be eccentric.

Bottom line: Fort Sumter, Pearl Harbor, the assassination of JFK, the 9/11 debacle and many more: the Deep State will commit murders of presidents or of thousands of civilians foreign and domestic until We The People learn to focus on our target: their power source and legitimizing pet: *Congress*.

Churchill's Folly: How Winston Churchill created modern Iraq by Christopher Catherwood, is the story of Britain's dissection of the Persian Empire into the petrodollar bloodbath we've seen ever since. Ralph Raico's *Rethinking Churchill* chapter in the book *Reassessing the Presidency* removed my blinders about the old Bulldog whose clever turns of phrase had always captured me. Bottom line: this book will teach you what a scheming monster Churchill was.

It's the Crude, Dude: Greed, Gas, War, and the American Way by Linda McQuaig is a well-

documented history of America's role in the game played first by the British and French in the sands of Araby. She lists individual deals, companies, sheikhs, and contracts over the past century. As bloody as we think Mohammedans are, this book proves that the Deep State, using *both* sides, causes these wars. Bottom line: we should feel sorry for any Middle East population as long as the Deep State owns Congress.

Reassessing the Presidency: The Rise of the Executive State and the Decline of Freedom is a 791-page lesson about how American history has been steered by our presidents. Edited by John V. Denson, each chapter can be read on its own to grasp one presidency or period. Bottom line: as Madison and Jefferson, both presidents themselves, reminded us: presidents are not to be trusted. The People must stay in control and ever-vigilant.

The Costs of War: America's Pyrrhic Victories is another compendium edited by John Denson. A treasure-trove explaining why wars were fought. Worth buying for Raico's *Rethinking Churchill* chapter alone; puts the butcherous Bulldog of Britain in the hall of infamy with Lincoln, TR, and FDR. But read Denson's *A Century of War* first.

War is a Racket is the small, powerful classic by the most-decorated officer in the history of the US Marine Corps, Major General Smedley Butler. He describes how the military industry – all the branches – conditions young minds to do its will, right or wrong; how he, as a decorated officer, did the bidding of banks, oil companies, sugar companies, and military contractors in plundering foreign countries. General Butler spent many years after retirement, warning America as former 5-star general President Dwight Eisenhower did 25 years later in his farewell address when he coined the term 'Military Industrial Complex'. Bottom line: top military brass exposed the Deep State 80 years ago.

Truth is a Lonely Warrior by James Perloff is like a Cliff's Notes version of half a dozen books mentioned here. For a lot of American history in one small book, read this one.

The War Lovers: Roosevelt, Lodge, Hearst and the Rush to Empire, 1898 by Evan Thomas is the amazing story of how America was transformed from a non-interventionist economic giant into the world's foremost military plundering and invading power, knocking England from its hegemonic throne. Teddy Roosevelt was a romantic fraud; a sickly child who overcompensated by bullying the world. With his best friend, powerful warmonger Henry Cabot Lodge – and the timely help of America's most powerful newspaper man of the time – these men *manufactured* the Spanish-American War to plunder the Philippines, Guam, Puerto Rico and others. Bottom line: as the Deep State used Lincoln to hijack our Constitution and occupy America, they used Teddy Roosevelt to spawn the Military-Industrial Complex that plagues the whole world to this day.

Wilson's War: How Woodrow Wilson's Great Blunder led to Hitler, Lenin, Stalin & World War II by Jim Powell is an excellent primer on Tom 'Woodrow' Wilson, highlighting the milquetoast do-gooder's colossal blunders from Mexico to Venezuela to America joining Europe's two world wars for huge military industry profits. Reading this account of presidential incompetence that many other presidents have since displayed, I finally understood that Wilson's chief weakness wasn't incompetence so much as useful wicked-ness. Bottom line: how Wilson knowingly dragged America into Europe's mega-wars.

FDR's Folly: How Roosevelt and his New Deal prolonged the Great Depression is the second primer on America's world-war presidents by historian Jim Powell. As he does with Wilson, the author

illustrates how mendacious, bungling and evil FDR was. The hero of my parents' generation was also a good friend of Stalin, who killed 20 million of his own people. Another Deep State tool.

Roosevelt's Secret War: FDR & World War II Espionage is the story of FDR's creation of America's intelligence net-work. Author Joseph Persico says, "Few leaders were better adapted temperamentally to espionage than FDR; he compartmentalized information, misled associates, manipulated people, conducted intrigues...and private communications, scattered responsibility, duplicated assignments, provoked rivalries, held the cards while showing few, and left few fingerprints." And this from an author *that likes FDR*, referring to him as a principled Machiavellian who hoped to get America into World War II even though most Americans wanted nothing to do with it.

Day of Deceit: The Truth about FDR and Pearl Harbor is Robert B. Stinnett's copious proof showing that Pearl Harbor was no surprise to FDR, but the 9/11 that the devious man needed to prime a multi-billion-dollar war on both sides of the Atlantic. Millions of new jobs; what's a few tens of thousands dead? Like Persico, Stinnett still supports FDR; yet by simply reporting what he found, Stinnett's smoking guns expose FDR as a puppet of the Deep State 30 years before Eisenhower coined 'military-industrial complex'.

Reset: Iran, Turkey, and America's Future is another master work by Stephen Kinzer. About 99.99% of Americans have never heard of the popular revolutions against Islamic rule by the people of Iran and Turkey a century ago. The 'Young Turks' – led by Mustafa Kemal Ataturk – succeeded, while the Persian (Iranian) people were enslaved in the oppressive ways of Mohammed. Fascinating.

The New Empire of Debt by Bill Bonner and Addison Wiggin is the second edition of a work that traces America's past 120 years of world conquest, measuring blood and money with a mix of humor and morose fact that keeps you turning the pages to find out how stupid we can get before Congress' Deep State puppeteers bankrupt us entirely. Bottom line: illustrates exactly how America has become so hated around the world, and so bankrupt.

Two More on Lincoln, the first Deep State Puppet

Forced Into Glory: Abraham Lincoln's White Dream is a 662-page shocker by Black author and history scholar Lerone Bennett. This is from the back cover of this courageous American's book: *"Every American schoolchild knows the story of "The Great Emancipator" who freed Negroes with the stroke of a pen out of the kindness of his heart. (But) Lincoln wasn't the great emancipator...(he) was a conservative politician who said repeatedly that he believed in White supremacy. Not only that, he believed Blacks and Whites would be better off separated, preferably by the Atlantic Ocean...(his) Emancipation Proclamation...freed few if any of the slaves, and he called for the deportation of African-Americans and the creation of an all-White country."*

Bennett's scholarship is impeccable, his indictment withering. Are all men created equal as the Declaration of Independence holds? Not according to Lincoln, Bennett writes on page 315: *"Large chunks of Lincoln's debate speeches...are taken from Henry Clay's mouth...Lincoln said he had never tried to apply the principles of the Declaration of Independence to slavery or the political rights of Blacks in America. On at least fifteen occasions, he said publicly that the principles of the Declaration didn't require him or anybody else to do anything about slavery in the South and Jim Crow in the North."* Bottom line: Lincoln was a racist monster and best salesman to ever live in the White House.

America's Caesar: The Decline and Fall of Republican Government in the United States of America by Greg L. Durand probes more deeply than DiLorenzo into the personal and religious aspects of Lincoln's character, using primary sources to prove he was a cross between Bill Clinton and Saddam Hussein: a godless butcher with a slick public pitch. After you read these quotes from his friends, contemporaries, and Lincoln's own pen, you'll know that you had a *propagandist* education.

The U.S. Constitution

The Constitution Made Easy by Mike Holler (original edition) is a spiral-bound desk copy of the U.S. Constitution with a unique design. It features the original, archaic language on each left-hand page with the modern language version on the right-hand facing page. The author has provided a numbering system for each clause in the Constitution. All amendments are integrated in context where they affect the law. Bottom line: if you can still find a spiral-bound edition, buy this reference. I use it almost every day.

Free, Sovereign, and Independent States: The Intended Meaning of the American Constitution by John Remington Graham explains the U.S. Constitution clause by clause, tracing legislative history from the kings' courts and parliaments of Great Britain to our Constitutional Convention. This ready reference on every clause in the Constitution is a masterful briefing on the origins of America's Supreme Law. Bottom line: this is the concise, historically complete explanation of every sentence in the U.S. Constitution.

The Founders' Constitution by editors Kurland and Lerner is a 5-volume massive reference set offering a more in-depth treatment than Graham's. It includes extracts from leading works of political theory, history, law, and constitutional argument that the Framers and their contemporaries used and produced. Available in paperback and CD-ROM, I find the electronic edition considerably handier. Bottom line: this is a far more in-depth background on the U.S. Constitution than Graham's book above, but Graham's work is more comprehensive regarding the legal roots of every clause.

The People Themselves: Popular Constitutionalism and Judicial Review by Larry D. Kramer, former dean of Stanford Law School, is no dry tome filled with legal jargon. It is a refreshing look at why We the People have more lawful power than the U.S. Supreme Court. Dean Kramer discusses why it is critical that We the People begin to exercise that power peacefully and lawfully – or we will lose that power, and rule of law with it. Bottom line: We the People have more power and authority than any U.S. supreme Court; we just haven't used it....until now.

Founding Fathers (Roots of Our Fallen Condition)

The First American Republic 1774-1789 by Thomas Chortlon is similar to an out of print book called *President Who?: Forgotten Founders* by Stanley Klos.

George Washington called Peyton Randolph "the Father of our country" because Randolph was the first President of the United States in Congress Assembled, and 14 presidential administrations existed prior to that of George Washington. Bottom line: Read this one and you'll agree that most of us were cheated in our education.

The Republic of Letters: The Correspondence Between Jefferson and Madison 1776-1826 a 3-volume compendium of 50 years' correspondence between the two giants among America's founding fathers. Series editor James Smith makes segues from their correspondence to their historical

context, helping the reader grasp these founders' development over their lifetimes. I learned more about Madison from these letters than from the seven Madison biographies I have read. To grasp a man's mind, read his letters.

Democracy in America by Alexis deTocqueville is a classic work of economics, sociology, and political science. Although the young Frenchman did not grasp our republican form of government, he was prophetic about *democracy* in America. Our founders created a representative constitutional republic of sovereign States specifically to *avoid* democracy, majority rule that always degenerates into warring mobs, grabbing for goodies from the all-powerful Nanny State.

From his limited view as a foreigner, Tocqueville accurately predicted that democracy in America would degenerate into soft despotism and 'tyranny of the majority' as Madison predicted 50 years earlier. Tocqueville said that majoritarian tyranny would result from two corrupting factors: dependence on government, and growing prejudices of increasingly ignorant masses against one another.

He was correct. After 150 years of government education, most Americans are European socialists, unfit to rule our passions or to superintend our servant government, instead making it their master, begging security and provision from it.

Economics, Money and Banking

Economics in One Lesson by Henry Hazlitt is a classic economics primer for people who would never read economics subjects but want to know how labor, money, government and credit operate in society to cause wars, inflation, depressions, and such.

The Mystery of Banking by Murray N. Rothbard, a student of Ludwig von Mises, a founder of 'Austrian School' classical economics. Rothbard shows where the bodies were buried as bankers and Washington D.C. debased and despoiled our currency and engage daily in fraud, theft, and counterfeiting. More importantly, on pages 262-268 the author provides a concise plan to restore lawful currency and banking in America that, together with the work of Professor Huerta de Soto (see below), AmericaAgain! is using to draft our Lawful United States Money and Banking Act.

Blood Money: The Civil War and the Federal Reserve by John Remington Graham is a little booklet explaining that the Federal Reserve scam actually began generations before the Jekyll Island gang and Congress teamed up in 1910-13.

Barbara Villiers or, A History of Monetary Crimes by Alexander del Mar is a tiny book with a misleading name. Villiers was a favored mistress of an English king, for whose personal benefit coinage laws were passed. If you think this bizarre, read Rothbard's history, cited above; American monetary legislation since Lincoln's time has been the same kind of deals but with many 'mistresses'.

The Case Against the Fed by Murray Rothbard is a small book with a practical goal: to show how we can shut down the longest-running counterfeiting scam in history. This work forms the basic guide for the design of our proposed legislation, *The Lawful American Money and Banking Act*.

Money, Bank Credit, and Economic Cycles in the second English edition (2009) by Professor Jesus Huerta de Soto is the finest single volume in print on practical economics. Like the late Murray Rothbard, this author also explains the criminal nature of the fractional reserve banking scam throughout history; how all business boom-and-bust cycles have been created by the Federal

Reserve crime families. Like Joseph Salerno in his book *Money: Sound & Unsound*, the author explains how the theories of Keynes and Marx are still used by central banks and the banking industry generally to defraud us. In his final chapter, Professor de Soto offers a simple, powerful plan to restore honest money and banking.

Pieces of Eight: The Monetary Powers and Disabilities of the United States Constitution by Edwin Vieira, Jr. is the definitive explanation of lawful U.S. money as stipulated in our Supreme Law, and also the definitive history of the U.S. Dollar. Out of print for about a decade, the huge two-volume hardbound set (over 1,700 pages) is available again through Amazon.com and at \$200 is a bargain if you need definitive legal citations regarding U.S. money.

Unaccountable: How the accounting profession forfeited a public trust by Mike Brewster takes you from ancient clay tablets in Sumeria up to the breakup of the Big Eight, in a fast-moving tale of deceit and unprofessionalism, making 'the dismal profession' a riveting read.

For background on how deeply Congress has been involved in financial crimes, *America Again! – The Movie* is the best start, but here are a few good resources regarding banking:

The Best Way to Rob a Bank is to Own One by UMKC Law professor and former federal bank regulator William Black explains how at the end of last century the S&L crisis was a tremor of things to come. Many more recent books expose the grifters' games today. Three good ones are:

It Takes a Pillage: Behind Bailouts, Bonuses and Backroom Deals From Washington to Wall Street by Nomi Prins.

The Great American Stickup: Greedy Bankers and the Politicians Who Love Them by Robert Scheer

Griftopia: A Story of Bankers, Politicians, and the Most Audacious Power Grab in History by Matt Taibbi

If you're not a reader, learn how corrupt the banking industry is and how it controls Congress and presidents, by watching the Academy-Award winning documentary *Inside Job*. You'll never feel the same walking into your bank.

Liberals and Other Corruption

Ideas Have Consequences by Richard M. Weaver is a little classic which proposes that language, virtue, maleness, femaleness, and ancient mores have almost gone out of our world. I disagree with Weaver's somber note at the end, but this book caused me to think about truth, goodness, and beauty outside my religious categories.

Amusing Ourselves to Death by Neil Postman is the most trenchant, helpful guidebook for ridding your home of television. Written in 1985, Postman's work is in many ways an extension of the thoughts of Walter Ong in his classic *Orality and Literacy*. There are clear reasons why the

American mind degenerated as it has; to know why these things happened and how they are happening still, read Postman. Then sell your televisions and start buying good books; you'll be wealthier in spirit.

Constitutional Chaos: What Happens When the Government Breaks its Own Laws by Fox News Senior Judicial Analyst and former New Jersey Superior Court Judge Andrew P. Napolitano is the first book I would read if you'd like to unfold the story of our constitutional crisis in stages.

Lies the Government Told You: Myth, Power, and Deception in American History is perhaps Judge Napolitano's best work yet; a list of 17 lies by which the federal Leviathan keeps citizens on their leashes, versus the other way around, which was the Founders' intention. Judge Napolitano is the most honest jurist writing and speaking publicly today in America about the moral bankruptcy of the federal government, including its courts.

The Beast on the East River: The U.N. Threat to America's Sovereignty and Security by Nathan Tabor, the founder of The ConservativeVoice.com, is the best analysis of the U.N. threat that I've read. We used this work to draft the sections of the AmericaAgain! Declaration that deal with ending our U.N. debacle.

The Master Switch by Columbia University professor Tim Wu explains several things that I had always wondered about. How did the big radio corporations of the early 20th century become big television and media empires by the end of the century? How do media content empires fit together with the distribution empires to determine what Americans see and hear? Is the Internet really the open sea of information for everyone to dip into as we imagine, or do certain entities control what we can get access to, and how it's presented? What about Microsoft, Apple, and Google (the 800-pound gorilla on the block, whose motto was "don't be evil")? They are being co-opted by government to be evil, controlling the content of what we see as the Internet world. The author probes all this, and more.

Christians, Muslims and Jews

A Wind in the House of Islam by David Garrison is the story of the nine geo-cultural variants of Islam around the world – what the author calls 'rooms in the House of Islam' – and how the Wind of God's Spirit is blowing through every one of them. Garrison spent three years travelling 250,000 miles through every corner of the Muslim world to investigate reports of Muslims turning to faith in Christ. The researcher collected the stories of over 1,000 formerly-Muslim Christians, asking them: "What did God use to bring you to faith in Christ? Tell me your story." The result is an unprecedented look into the greatest turning of Muslims to Christ in history; stories of men and women who have sacrificed everything – home, family, even their lives – to follow Jesus. Hear from men and women from Africa to Indonesia and everywhere in between; how God is at work through answered prayer, dreams and visions, and technology (Internet, satellite television, video and audio tools). Gain insight into each of the nine geo-cultural 'rooms' in Islam and most importantly, learn how we can be part of the greatest turning of Muslims to Christ in history.

The three main takeaways: 1) Christianity is growing today as never before on earth; 2) There is great need for sound Biblical teaching among new converts because syncretism and pseudo-Christianity are rampant; and 3) Americans need to repent our blind hatred of all Muslims.

Similar books surveying the sudden growth of Christianity in the Middle East today are such books as *Jesus in Iran* by Eugene Bach; *Too Many to Jail: The Story of Iran's New Christians* by Mark Bradley; *Muslims, Christians and Jesus* by Carl Medearis; *The Coming Fall of Islam in Iran* by Reza Safa; *Seeking Allah, Finding Jesus* by Nabeel Qureshi and many others.

The Next Christendom by Philip Jenkins, Penn State University professor, suggests that the rapid growth of primitive and Pentecostal Christianity – within and alongside existing traditions – is reshaping the world. 'Southern Christianity', Jenkins proposes, is Pentecostal, evangelical, and politically and morally conservative, pushing aside the cosmopolitan, unbelieving northern

sensibilities that marked the senescence of European and American mainline denominations that now dismiss the basic teachings of the Bible in favor of enlightened, metrosexual life. Chapters 3 and 4 are his statistical and demographic thesis; slow, dry reading. I recommend reading the first two chapters, then skip over to Chapter 5.

Even as the politically correct Pope 'Francis' regurgitates the Obama line and Hollywood political correctness, the Next Christendom is draining the dying European denominations; for instance, openly challenging Anglicanism's apostasy. Jenkins posits that geopolitics, too, will be shaped by new Christians. 'Northern Christianity' and its secular political ideals are dying, as the opposite is happening in the southern hemisphere. With the gospel no longer shaped by a Euro-centric ethos and historical memory, the prophets of the 'post-Christian' world are wrong. The Church is as alive as ever, but admittedly facing syncretistic challenges.

Martyrs Mirror by Thielemann vanBraght is a hardbound history of martyrs from the apostles through the so-called 'Reformation', when believers who refused to sprinkle their babies and call it baptism were ruined, jailed indefinitely and left to starve, drowned, or burned to death by Roman Catholics, Lutherans, and Calvinists. Review these murders to see: a) Christians have been as savage as Muslims, for religion; b) the 'Reformation' was a *political* movement; and c) 'Reformed' folk run from these facts just as Catholic apologists avoid discussing the Inquisition.

The Untold Story of the New Testament Church by Frank Viola explains how trying to read the Bible in the order we have it today is like re-arranging all the chapters of a novel, binding it back together, and then trying to make sense of the story. A fascinating book.

Finding Organic Church: A Comprehensive Guide to Starting and Sustaining Authentic Christian Communities also by Frank Viola is a sequel to the amazing book, *Pagan Christianity?* – explaining how to gather with other believers in an organic fellowship without 501c3 lunacy or the opposite lunacy of most short-lived house church startups.

The Great Christian Revolution by Otto Scott demonstrates that no matter how they may balk, even the most heathen anti-Christian in the West benefits from centuries of Christian foundation in every area of human endeavor. Their very liberty and relative prosperity are direct results of the faith and perseverance of Christians for centuries before them.

Dismissing God by D. Bruce Lockerbie exposes the lives and work of influential writers of Lincoln's and subsequent generations. The book explains how angry humanists kicked out our moral underpinnings: Emily Dickinson, Walt Whitman, Ralph Waldo Emerson, Nathaniel Hawthorne, Herman Melville, Mark Twain, William Blake, Percy Bysshe Shelley, John Keats, John Ruskin, William Morris, William Butler Yeats, James Joyce, D.H Lawrence, Oscar Wilde, F. Scott Fitzgerald, and others. Bottom Line: most government school literature is the product of anti-God perpetrators, so it is no wonder that these institutions are destroying our civilization.
